WHO IS IT-ISAC?

The IT-ISAC serves as a force multiplier by connecting specialized expertise and analysts from across diverse industries. The IT-ISAC makes it possible to mitigate common threats. We share intelligence from our global network of experts across the critical infrastructure community.

IT-ISAC members include security leaders from the world’s largest technology companies, who actively collaborate to protect their enterprises. Information sharing within the IT-ISAC enhances risk management by providing global visibility of emerging and near real-time cyber threats. Members use our information to protect their enterprises and customers.

We are an exclusive, industry-only forum created to help companies minimize threats, manage risk, and provide near real-time analysis to real-world cybersecurity challenges. We engage with a global network of subject-matter experts from the world’s leading technology companies to enhance cross-industry awareness. The IT-ISAC is the only ISAC that supports three critical infrastructure sectors - information technology, food and agriculture and elections.

Collaborating through IT-ISAC provides an effective force-multiplier for us. Learning from each other enables everyone to more quickly adjust strategies and tactics. Plus, IT-ISAC’s global network of trusted partners provides us regular access to sensitive indicators.

Peder Jungck, VP GM Intelligence Solutions BAE Systems, Inc.

IT-ISAC provides time sensitive indicators and warnings, including malware signatures, malicious IP addresses, and attack tactics and techniques. IT-ISAC information enables us to make informed risk management decisions.

Jim O’Conner, Chief Information Security Officer, Cargill

MEMBERSHIP BENEFITS

IT-ISAC Membership is a cost-effective way for companies to scale their cybersecurity programs. IT-ISAC membership serves as a force-multiplier to internal capabilities. It provides access to analysts, intelligence and effective practices that companies otherwise may not be able to procure. In addition, IT-ISAC membership comes with the following benefits:

- **Automated Sharing of Threat Intelligence:** Access to the IT-ISAC’s intelligence management platform that stores, aggregates and contextualizes thousands of indicators each week. Leverage custom API and STIX/TAXII integrations for automated sharing.

- **Strategic and Tactical Analysis:** Daily threat reports documenting and analyzing information shared by members, security partners, and pulled from open sources.

- **Incident Response:** Incident alerts from the IT-ISAC, security partners, and members. Post request for information and assistance for threats and trends detected on your environment to help accelerate response.

- **Analyst to Analyst Exchanges:** Collaborate with analysts from peer companies to analyze incidents and to address common security challenges and threats. Your concern immediately becomes the concern of other members and partners.
REAL-TIME RESPONSE AND KNOWLEDGE SHARING
Members quickly and regularly share timely threat-indicators and effective defensive measures — enabling members to build and implement more informed risk management strategies.

IT-ISAC leverages the TruSTAR intelligence management platform that helps members identify and prioritize threats and enables automated sharing and threat analysis. Through this platform, members have access to, and can customize the analysis of, thousands of threat indicators shared each week, including those from the U.S. Department of Homeland Security, IT-ISAC Members, and IT-ISAC partners across the globe.

Members also receive independent analysis of ongoing cyberattacks and newly discovered vulnerabilities.

WHEN AN IT-ISAC MEMBER HAS INFORMATION TO SHARE OR OBTAIN, WHAT ARE THEIR OPTIONS?

- Upload into TruSTAR
- Send note to the appropriate mailing list
- Email IT-ISAC Operations Center
- Share at Tech Committee or SIG meetings
- Secure Chat Capability

Our adversaries are excellent at sharing information on how to break into corporate networks. IT-ISAC is a valuable industry forum for trusted information sharing. It is one of our methods to combat and stop those meaning to harm our networks. IT-ISAC is the best example of industry collaboration to address cyber risks.

Mary Ann Davidson, Chief Security Officer, Oracle Corporation
